NYC meeting prep: Emad Lotfalla and Bobby Hubner

Prepared for Joey Walker by Eden Partner Group · 12 Nov 2026 · Built from public sources only. Read on the plane; about 10 minutes.

The 60-second version

- **Emad** is the owner's-side construction head at Related: EVP of Design and Construction, 35+ years, a registered architect and engineer by training, and the man who ran Hudson Yards. He thinks in logistics, systems, approvals and union labor across a whole campus. He is not a superintendent.
- **Bobby** is Founder, President and CEO of Promethean Builders (founded 2021). He came up as a superintendent in New York and spent 22 years with a major national GC before starting his own firm. He builds teams and cares about schedule command and the operations layer between the executive and the general super.
- **The project** (public record): Citadel's headquarters tower at 1201 Brickell Bay Drive, Miami. 54 stories, about 1,032 feet, about 1.7 million sq ft, Foster + Partners, $1B+. Related is the development partner.
- **Your angle:** speak Emad's language on logistics, vertical transportation, approvals and phasing. Speak Bobby's on schedule, teams and running the field. Bring specifics: numbers, floors, crane counts, jumps, sequences.

Emad Lotfalla, Related Companies

Fact	What the public record says
Title	Executive Vice President of Design and Construction, Related Companies (since 2013)
Scope	Leads all design and construction for the Hudson Yards development; leads design and construction for Related's New York work; advises the senior executive team on the global portfolio. Oversees Related's trade contracting and construction operating companies.
Experience	35+ years; over 12 million sq ft overseen across office, residential, healthcare, academic, aviation, infrastructure and cultural. Before 2013: construction executive and principal-in-charge on major NYC projects.
Credentials	Bachelor's degrees in Architecture and Engineering, Ain Shams University, Cairo. Registered architect, State of New York.
Named projects	Hudson Yards; World Trade Center Transportation Hub; Whitney Museum; JetBlue Terminal 5 (JFK); Delta Terminal 4 expansion (JFK); Hunter College Silberman School of Social Work; Kings County Family Court.
Hudson Yards role	Site logistics, security, coordinating construction of the buildings across the campus, and union relations.

What he has said on the record

- On the elevators at 50 Hudson Yards (trade press, Elevator World): the TWIN system "let us deliver excellent service to a massive building." In the same piece he describes COVID-era slowdowns at the Building Department that made approvals harder to resolve. *Quote taken from a search summary; the article itself blocked me, so check the wording before you repeat it.*
- Related's own bio of him has no direct quotes. I found no long-form interview.

How to read him

- Owner's-side, systems thinker. Expect questions about how you coordinate trades, hoisting and vertical transportation, inspections and approvals, and how you keep a tall job moving when the city does not.
- A designer's eye. He will respect a super who reads drawings, catches coordination problems early and talks to architects and engineers without friction.
- He has built airports, transit hubs and a campus with union labor. Show you can run a heavy-MEP, high-density job inside that kind of environment.

Bobby Hubner, Promethean Builders

Fact	What the public record says
Title	Founder, President and CEO, Promethean Builders (founded 2021)
Background	20+ years of construction management in New York City. 22 years with a major national GC, joining as a superintendent in January 2000 and rising through project superintendent, procurement agent, project manager and project executive to vice president and construction executive.
Projects	Madison Square Garden Transformation; The Greenwich Lane (West Village); 550 Washington Street (Google New York headquarters); Lincoln Center renovations (David Geffen Hall, Alice Tully Hall, Juilliard).
Stated values	"Takes great pride in building high performing teams." Develops construction professionals; keeps long-term client and partner relationships.
Florida	Promethean has offices in New York, New Jersey and Florida (North Miami office; Florida run out of West Palm Beach by Alan Fahey, GM Florida).

What he has said on the record

- On the Google 550 Washington job (ENR): precast erection meant crews about a quarter the size of cast-in-place, and one erector could alternate steel and precast, which "gives us a lot of flexibility." He talks about crew size, sequencing and keeping trades out of each other's way.
- That project converted a four-story freight terminal into about 1.3 million sq ft over 12 stories. It was a schedule-driven, logistics-heavy job.

How to read him

- A former superintendent who became an executive. He judges field people fast. Lead with how you run the field, not with titles.
- He wants a layer above the general super who drives the schedule, works the APM staff and keeps the team aligned. Be ready to say how you do that, with a real example.
- Schedule is a working tool for him, not a file-cabinet document. Know your P6 and your breakout schedules.

The project in public terms

- **Citadel Global Headquarters, 1201 Brickell Bay Drive, Miami.** About 54 stories and 1,032 feet, about 1.7 million sq ft (about 1.3 million office plus a rooftop hotel, dining and wellness). Foster + Partners. Reported cost: more than $1 billion. Citadel's FAA filing identified three cranes close to 1,300 feet.
- Related Companies is the development partner. Reported construction start was Q3 2025; **I could not confirm current status, and no public source names the general contractor.** Do not state either as fact.

- Related Companies (Stephen Ross, New York) is a different firm from Miami's Related Group (Jorge Pérez). Related and Swire's One Brickell City Centre is a separate tower. Do not mix them up in the room.

Talking points for you

- A mega-project story with numbers: height, floors, hoists, crane plan, peak manpower, how you sequenced the core and the skin.
- Vertical transportation and hoisting: how you plan elevators for construction use, temporary hoists and the turnover to permanent cars.
- Heavy MEP: mechanical floors, medium-voltage risers, commissioning. Any data center or hospital work counts in your favor.
- Approvals and the city: how you keep inspections and sign-offs from stalling the schedule. Emad has said the Building Department can be a bottleneck.
- Union labor in a dense urban site and how you manage jurisdiction and logistics.
- Your operations-layer story: how you have run supers and APMs under you and kept one schedule.

Questions to ask them

- *Emad:* How is the Related and Promethean team split on a joint-venture job like this? Who owns site logistics and hoisting?
- *Emad:* What went best and worst on vertical transportation at Hudson Yards, and what would you do differently on a Miami supertall?
- *Bobby:* What does a great first 90 days look like for this seat?
- *Bobby:* How do you want this role to split time between the field and the office?
- *Both:* What does success look like at topping out, and who will I report into day to day?

Housekeeping

- Confirm who is on the panel. Our notes name the interviewer from Related by a different first name than Emad's; check with Kev before you walk in.
- Bring your updated project list with high-rise references. Bobby asked for it.
- Keep compensation and terms for Kev. Do not negotiate in the room.
- Public sources only here. Anything not marked as confirmed should be checked before you repeat it.
